

Log

Note: Due to exams and travel commitments, I wasn't able to work on the task for too long. Spent around 5 hours in total.

Hour 1

I don't have much experience working with APIs. So, I watched a video on them and tried to set up OpenAI API in vs code as practice, didn't work, I kept getting the error that I had reached usage limits, even though I still had it available on the OpenAI website. Anyway, I just decided to start with the task.

Hour 2

Made some progress, in setting up the environment. First, I tried with my own key to see if the thing worked, but I got the same error. I tried using the OpenAI key provided by Impact Academy but kept getting the same error. Then, I asked a friend, and he asked to buy some credits, did that, and it worked. I bought 5 dollars worth of credits. Then, I tried to set up the agent, but for some reason I kept getting errors with replicate. Tried to fix it.

Hour 3

Still, tried to make replicate work and build the agent but wasn't able to.

Hour 4

Decided to stop that and at least, do some kind of assessment. So, in the end, just used GPT 4 to assess the performance of GPT 3.5 Turbo and GPT 4o. Unfortunately, I did not have time to compare their performance.

Hour 5

Finished writing this log and the report. If I had more time, I would first learn how to build a simpler agent instead of straight jumping into the task and would have tried to make a very toy version of this task, maybe with only one question at first, instead of trying to do everything.
